Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

3',5'-cyclic-nucleotide phosphodiesterase (EC 3.1.4.17), cGMP-stimulated - rat
N'Alternate names: cGMP-dependent phosphodiesterase
C;Species: Rattus norvegicus (Norway rat)
C;Bate: 26-Aug-1999 #sequence_revision 26-Aug-1999 #text_change 05-Nov-1999
C;Accession: JC2486

                                                        ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSED IN AORTIC SMOOTH MUSCLE CELLS,
HEART, PLACENTA, SKELETAL MUSCLE AND PANCREAS AND, TO A MUCH
LESSER EXTENT, IN BRAIN, LIVER AND LUNG.
DOMAIN: COMPOSED OF A C-TERMINAL CATALYTIC DOMAIN COMPOSED OF A C-TERMINAL CATALYTIC DOMAIN CONTAINED THO BUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL REGULATORY DOMAIN
WHICH CONTAINS TWO HOMOLOGOUS ALLOSTERIC CGMP-BINDING REGIONS, A
        POTENT INHIBITOR OF PDESA AND IS EFFECTIVE IN THE TREATMENT OF PENILE ERECTILE DYSFUNCTION, ALSO INHIBITED BY ZAPRINAST. PATHWAY: CYCLIC nucleotide metabolism.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; PDE5Al (SHOWN HERE) AND PDE5A2;

INTRACELLULAR CONCENTRATION OF CYCLIC NUCLEOTIDES. THIS
PHOSPHODIESTERASE CATALXZES THE SPECIFIC HYDROLXSIS OF CGMP TO 5:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PATHWAY: CYCLIC nucleotide metabolism.
ALTERNATIVE PRODUCTS: 2 ISOFORMS; PDE5A1 AND PDE5A2 (SHOWN HERE);
ARE PRODUCED BY ALTERNATIVE SPLICING.
DOMAIN: COMPOSED: OF A C-TERMINAL CATALYTIC DOMAIN CONTAINING TWO
PUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL REGULATORY DOMAIN
WHICH CONTAINS TWO HOMOLOGOUS ALLOSTERIC CGMP-BINDING REGIONS, A
                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Proc. Natl. Acad. Sci. U.S.A. 87:288-292(1990).
-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 = guanosine 5'-phosphate.
-!- SUBUNIT: COMPOSED OF TWO ALPHA' SUBUNITS THAT ARE ASSOCIATED WITH 3 SWALLER PROTEINS OF 11, 13, AND 15 kDa.
-!- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bos taurus (Bovine).

-i- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 = guanosine 5'-phosphate.
-i- SUBGNIT: OLIGOMER COMPOSED OF TWO CATALYTIC CHAINS (ALPHA AND BETA), AN INHIBITORY CHAIN (GAMMA) AND THE DELTA CHAIN.
-i- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amino acid

Submitted (JAN-1996) to the EMBL/GenBank/DDBJ databases.
-!-CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)O = quanosine 5'-phosphate.
-!- SUBUNIT: COMPOSED OF TWO ALPHA' SUBUNITS THAT ARE ASSOCIATED WITH 3 SMALLER PROTEINS OF 11, 13, AND 15 kDa.
-!- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens (Human).

Submitted (MAY-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THIS PROTEIN PARTICIPATES IN PROCESSES OF
TRANSMISSION AND AMPLIFICATION OF THE VISUAL SIGNAL.
-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)O =
-!- SIBUNIT: OLICOMER COMPOSED OF TWO CATALYTIC CHAINS (ALPHA AND
BETA), AN INIBITIONY CHAIN (GAMMA) AND THE DELFA CHAIN.
-!- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Patent No. US2002010312041

GENERAL INFORMATION:

APPLICANT: Ramakrishnan, Shyam

TITLE OF INVENTION: Regulation of Human

TITLE OF INVENTION: Phosphodiesterase-Like Enz

FILE REFERENCE: 02973.00511

CURRENT APPLICATION NUMBER: US/09/891,216

CURRENT FILING DATE: 2001-06-26

PRIOR PAPLICATION NUMBER: US 60/213,998

PRIOR PILING DATE: 2000-06-26

PRIOR FILING DATE: 2001-06-26

PRIOR FILING DATE: 2001-06-26

PRIOR PELICATION NUMBER: PCT/EP01/07289

PRIOR PELICATION NUMBER: PCT/FP01/07289

PRIOR PELING DATE: 2001-06-26

NUMBER OF SEQ ID NOS: 20

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ORGANISM: Homo sapiens
